Version 1

UK Macro-moth

Verification Grade Guidelines

Grading Definitions

These grades refer to the adult life stage only.

1. Species that can be relatively easily identified even by inexperienced recorders with the use of up-to-date field guides. Such records would be accepted without the need for additional evidence if they conform to the normal flight period and geographical range of the species.
2. Species where care is needed for identification. Should not present any difficulty for experienced recorders, but inexperienced recorders may be expected to provide additional evidence in the form of photographs of reasonable quality that show as many of the identification features as possible or, alternatively, a specimen. Even experienced recorders may be expected to provide additional evidence if the record is outside of the normal flight period or geographical range of the species.
3. Species that are difficult to identify. Even experienced recorders may be expected to provide additional evidence, for example a specimen, particularly if the record is outside of the normal flight period or geographical range of the species.
4. Species that can only be identified following critical assessment, often involving dissection and examination of genitalia. A specimen should be retained for confirmation.
5. Ungraded.
